Intermediate software engineering interviews - core patterns + medium DSA

Target interview difficulty: Easy to Medium; some roles may include Hard questions

COMPANIES

Walmart Global Tech, Flipkart, Paytm, Myntra, Razorpay, Swiggy, Ola, OYO, BookMyShow, Expedia, JPMorgan Chase, Goldman Sachs, Wells Fargo, American Express

DSA TOPICS

Strong fundamentals: Complexity, arrays, strings, hashing, searching, sorting, recursion, linked lists, stacks and queues.

High-value patterns: Two pointers, sliding window, prefix sums, binary search on answer, sorting with intervals.

Trees & graphs: Binary trees, BST, tree traversals, BFS, DFS, basic shortest path concepts.

Algorithms: Heap/priority queue, greedy algorithms, basic backtracking and introductory dynamic programming.

INTERVIEW PREPARATION

• Practice Easy and Medium problems with readable, optimized code.

• Explain brute-force vs optimized solutions, edge cases, and complexity.

• Typical practice: two-sum, longest substring, merge intervals, valid parentheses, linked-list reversal, tree traversal, islands, basic coin-change.

Note: A concise preparation guide based on your uploaded PDFs. These are suggested study priorities, not guaranteed company-specific questions.
